Results Framework: Hand Hygiene for All Initiative

Objective: Accelerate progress on hand hygiene such that national COVID response actions incorporate hand hygiene and hand hygiene trajectories for universal access by 2030 are established within 5 yrs

Accelerators	2021 global outputs	2021 country outputs	2025 country outputs	2030 country outcomes
Financing	• Robust business case for financing hand hygiene. • Costing tool for national level use. • High-level event(s) to promote increased domestic and External Supporting Agency (ESA) funding towards hand hygiene.	• Costed government-led roadmap to bridge national COVID-19 response with long term development plans for universal access and to ensure sustainable financing.	• Fully financed government-led long-term development policies and strategies for hand hygiene at scale across settings, including health care facilities, schools, the workplace and public spaces.	• Governments implement fully-financed long-term development policies and strategies across multiple settings and make budgets and expenditure for hand hygiene publicly available.
Data, information & monitoring	• Standardised indicators, monitoring tools and methodologies across multiple settings. • Harmonised portals for ongoing monitoring of hand hygiene across multiple settings. • Global report on the state of hand hygiene.	• Government-led plans for monitoring hand hygiene access and practices in public settings to reduce transmission of COVID-19 and outbreaks.	• Government-led systems to monitor hand hygiene access and practices in HCFs and at least one other setting.	• Government-led systems to monitor hand hygiene access and practices in at least three settings.
Capacity	• Guide to national level hand hygiene planning through publication of model country roadmaps. • Tools for countries on advocacy, planning, costing and coordination, programming and monitoring and research.	• Regular government-led assessments of capacity to implement hand hygiene plans, with consideration for potential future shocks.	• Fully sufficient WASH training institutions/programmes available to maintain and improve capacity in the WASH sector.	• Sufficient capacity to implement hand hygiene plans.
Innovation, learning, & implementation	• Key insights from countries on how to sustain hand hygiene behaviour post-outbreak. • Evidence synthesis on effective hand hygiene programming, including behaviour change and supply chain innovation, and health and social impacts. • Research agenda towards evidence-based decision-making for hand hygiene programmes	• Experiences, challenges, successes, lessons learnt, in scaling up hand hygiene across settings, including how to implement during pandemics and other emergencies, shared by governments and partners.	• Innovative examples of resilient systems for hand hygiene services and evidence-based behavioural insights across settings, shared by governments and partners.	• Access to adequate and equitable hand hygiene services, in particular for women and girls and those in vulnerable situations, as well as effective behavioural interventions, delivered by governments and partners.
Governance & advocacy	• Champions for hand hygiene across settings and disciplines. • Advocacy toolkit for use by national actors across settings and sectors	• Functioning and effective intersectoral government-led coordination body across public and private stakeholders.	• One single government plan to achieve hand hygiene for all, managed by an effective responsible coordinating body.	• One single government plan to achieve hand hygiene for all, managed by an effective responsible coordinating body, with continual analysis, course correction and reporting on progress across sectors.
